Summary

Software Engineer with a background in fullstack systems, VR research, and internal developer tooling. Values craftsmanship and thoughtful system design, with a focus on building reliable, impactful technology.

Experience

Software Engineer

Immersive Technology Lab of Chulalongkorn University

November 2023 - March 2025

- Developed and conducted research on a transaction system for a Metaverse application, focusing on scalability and efficient data management.
- Led a research team on stroke treatment using Virtual Reality, creating innovative solutions for therapeutic environments.
- Compiled technical reports for paper writing, contributing to academic and industry publications.
- Facilitated communication between the technical team and business stakeholders to align project goals and ensure smooth delivery.

Back-end Developer Intern

Botnoi Group

May 2025 - July 2025

- Trained new members to full productivity within one week of onboarding.
- Developed AWS containerized services integrated with external vendor servers.
- Developed internal project management tools used across the company.

Projects

Typescript

Form to docx

2023

An automation tool which is used to read from Google Spreadsheet and generated the docx by given template which is being used for student filing a university's form.

Typescript

CardEditor

2023

A card creation tool for a custom card game which is use for both game designing and deck designing.

Go

Nakudynamo

2025

Local DynamoDB runner which is also manage it's own dependency which leads to easier development setup.

Other ongoing projects include a custom game engine, a personal CMS-backed blog platform, and an experimental Turing-complete programming language with C interoperability.

Publications

International Academy of Astronautics

(Mission Idea Contest 7 Finalist)

2021

ILNSS: Network for Position on Lunar Surface and Interplanetary Prototype

- Developed simulation models for satellite orbital movement using GNU Octave.
- Implemented time dilation and radio signal intensity calculations for interplanetary communication.
- Contributed to system-level design and feasibility analysis of the lunar navigation network.

Leaderships

Student Council of Chulalongkorn University
Commissioner on One Stop Service

2022 - 2023

Leader

- Adjust working system within commissioner section which lead to better workflow.
- Provided technical support for council decision-making process.
- Retrieving university club's data which lead to more centralize information that still uses today.

Skills

- | | |
|-------|------------------------|
| - C | - Java |
| - C++ | - Rust |
| - Go | - Python |
| - C# | - Javascript/Typecript |

Tools

- | | |
|----------------|-----------|
| - FastAPI | - ReactJS |
| - GoFiber | - AstroJS |
| - MongoDB | - Angular |
| - Apache Kafka | - Docker |

Education

Bachelor of Engineering
Computer Engineering
Chulalongkorn University
GPA 3.04

August 2022 - Present
